EVR PRODUCTIONS / CONTENT & LAUNCH HANDOVER

What we need to bring your website to life.

For the Weddings experience, Brands & Corporate experience, their eight menu pages and the customer quote-request flow.

> **Pricing policy:** no customer-facing prices, package amounts or automatic totals. Website visitors select their requirements; EVR discusses pricing on a call. No rate card is needed for the public launch.

60	12	6
recommended original photographs	recommended finished video masters	real project stories: 3 wedding-side + 3 corporate

These are recommended launch-content quantities, not fixed technical limits or a requirement to commission new shoots. Reuse approved assets across related pages. Three short hero loops, covers and web versions can be derived from the supplied masters. Logos, graphics and optional testimonial portraits are separate from the 60-photo count.

1. Brand and business essentials

- Final business name, logo spelling and tagline. Confirm whether both experiences use the same EVR identity.
- One editable logo master: SVG, AI or vector PDF. Include transparent PNG exports, plus light and dark variants if available.
- Brand colours and licensed fonts if already chosen. Otherwise approve the proposed warm wedding and blue corporate treatments.
- Business phone, WhatsApp number, enquiries email, office/studio address, Google Maps link, working hours, cities served and destination-travel policy.
- Official Instagram, YouTube, Vimeo, Facebook and other relevant profile URLs.
- One authorised approver and the person responsible for receiving enquiries and calling customers back.

2. Photographs: recommended 60 original images

Set	Count	What to supply
Full wedding story	12	One genuine project: couple portraits, candid emotions, rituals, family, venue/decor and celebration. Include wide hero-worthy compositions.
Pre-wedding story	12	One genuine project: natural interaction, portraits, walking/movement, location wides and close details.
Celebration story	12	One reception, engagement, sangeet or similar project: people, performances, family moments, venue and atmosphere.
Corporate / brand case study	6	People, premises, interview setup, final-film frame, working moment and shoot BTS.
Product / reels case study	6	Product hero, detail, use/demo, styled setup, reel frame and BTS.
Creator / podcast / YouTube case study	6	Host/guest, conversation, cameras/audio setup, recording environment, final frame and BTS.
EVR people and studio	6	Ideally 3 individual portraits, 2 working/BTS photographs and 1 group or studio photograph. Adapt to the real team; do not invent staff.
Total	**60**	**36 wedding-side + 18 corporate + 6 people/studio photographs.**

Orientation mix: wedding sets ideally 6 landscape + 4 portrait + 2 flexible crops each; corporate sets ideally 4 landscape + 2 portrait each. For the team, prefer 3 portraits and 3 landscape working/group/studio images.

Quality: original high-resolution JPG preferred, ideally 2500-4000 pixels on the long edge. No WhatsApp-compressed downloads, screenshots, social overlays or heavy watermarks. Identify photos that must not be cropped and the subject to keep visible. Supply only cleared photos, particularly where children or private ceremonies appear.

3. Videos: recommended 12 finished masters

Video type	Count	Preferred source	Use
Wedding showreel	1	16:9, around 45-90 seconds	Wedding opening, film feature and hero source.
Wedding-side project films	3	16:9, around 1-5 minutes each	One wedding, one pre-wedding and one celebration example, ideally matching the photo stories.

Video type	Count	Preferred source	Use
Corporate showreel	1	16:9, around 45-90 seconds	Brands & Corporate opening and hero source.
Corporate / product / creator project films	3	16:9, around 30 seconds-3 minutes each	Three real work examples, ideally matching the corporate photo sets.
Vertical reels	2	9:16, around 15-45 seconds each	One product/brand reel and one production/BTS reel for the portrait media placements.
YouTube production example	1	16:9; a 1-3 minute extract or a cleared full episode link	Demonstrate pacing, audio and longer-form editing.
Podcast example	1	16:9; a 1-3 minute extract or a cleared full episode link	Demonstrate multi-person recording, sound and editing.
Total	**12**	**Original client-approved masters. Lengths are recommendations, not strict limits.**	

Three hero cards: mark one wedding sequence, one brand sequence and one creator/BTS sequence. We can prepare three 6-12 second silent loops from these existing masters. They are not three additional shoots or required master videos. Provide preferred timecodes and safe crops if available.

Poster images: select one cover frame per published video, ideally 12. Covers can be extracted from video masters or chosen from the 60 photos, so 12 additional photographs are not required.

Delivery quality: original MP4/MOV; at least 1920 x 1080 for landscape and 1080 x 1920 for vertical, with 4K preferred when available. Keep the original frame rate and audio. Include clean versions without social platform branding. Supply SRT/VTT subtitles or a checked transcript for spoken content, including the language. A finished master is usually enough; raw footage is only needed if a new edit is agreed.

Permissions: identify the music licence and whether it permits website playback. Music cleared only inside Instagram is not automatically cleared for website use. Flag anything that needs a new soundtrack, muted version, face masking or client approval.

4. Information for each of the six projects

- Approved public title, service/category, date/year and city/venue if those may be disclosed.
- Client/couple names or an approved anonymised title.
- Brief in 2-3 sentences: what the client needed and the important story or message.
- What EVR actually delivered: photography, film, reels, episodes, quantities and formats.
- Short story/case-study description, around 80-150 words. Bullet points are fine; we can draft polished website copy for approval.
- Matching photographs, video, preferred cover and permitted credits.

- Written permission to publish. Share results or performance numbers only if supported and approved.

5. Website copy and genuine proof

Content	Recommended quantity	Details required
Company story	1, around 150-250 words	Why EVR exists, where it operates, approach and verified experience. Do not invent founding dates or client counts.
Wedding offering	1 service overview + event list	Events covered, photography/film options, albums and destination capabilities.
Corporate offerings	4 descriptions, 60-100 words each	Brand films, reels, YouTube and podcasts; scope, outputs and exclusions. Confirm actual services offered.
Process copy	5 wedding steps + 4 corporate steps	Approve the existing proposed journey or supply the real enquiry, planning, shoot, review and delivery workflow.
Team profiles	3 if genuinely applicable	Name, role and 40-70 word bio; a founder-only alternative is fine.
FAQs	12: 6 wedding + 6 corporate	Availability, coverage, travel, revisions, delivery, raw files, usage and how the call/quotation works.
Testimonials	4-6 genuine reviews	Exact approved wording, attribution and project type. Portraits/logos only with permission.
Corporate client logos	3-6 if cleared	SVG or transparent PNG, approved for public display. Omit if unavailable.

Optional video testimonials: 2-4 clips, around 20-45 seconds, clear audio and permission. These are additional to the 12 master videos. The current testimonial layouts need not all become videos; text reviews are a valid alternative.

6. Quote requests: information, not a public rate card

Confirm the choices customers should see, which are required, and which should be removed because EVR does not offer them.

- **Wedding:** event categories; maximum shoot days; date/session options; photographers, cinematographers, drone, live streaming and display services; pre-wedding durations; films, teasers, invitations, albums, raw-file requests and storage media.
- **Corporate:** shoot categories; crew and kit; production days; brand films, reels, YouTube/podcast edits, captions, thumbnails, output formats and intended usage.

- **Customer details:** confirm name, phone, email if needed, project/couple name, city, date, brief and preferred callback time. Decide what is required versus optional.
- **Enquiry handling:** who receives it, notification email, callback phone, business hours and an achievable response expectation. No response-time promise until approved.
- **Delivery method:** choose email delivery, manual WhatsApp hand-off, a staff inbox or another agreed integration. These are not implemented merely by supplying an email address.
- **Consent:** approve the callback/privacy wording and whether enquiries may be retained. Agree retention and deletion rules.

> The current website is a local prototype: enquiries are not sent, bookings are not confirmed and the staff demo is not authenticated. Finishing these workflows requires implementation and testing, not only replacing photos.

7. Policies, permissions and launch access

- Approved privacy notice, booking terms, payment/cancellation/rescheduling policy and copyright/usage terms. Obtain appropriate legal review; generic demo text is not a finished policy.
- Agreed delivery and revision policies, raw-file availability, archive/retention arrangements and how travel or specialist requirements are discussed.
- Permissions for wedding guests/couples, employees, speakers, client logos, venues, licensed music and featured minors as applicable. Do not send private identity documents as content proof.
- Domain name and owner, registrar/DNS access by invitation, hosting preference/account and who pays ongoing costs. Keep domain ownership with the client.
- Business mailbox setup and scoped access to any email provider or lead-management service selected for the live enquiry flow.
- Optional Google Business Profile, Search Console and analytics access via account invitations. Decide tracking and consent requirements first.
- Target launch date, one final approver and sign-off on content, mobile layouts, enquiry destinations and public pricing policy.

Do not send passwords, OTPs or payment-card information in a shared content folder or chat. Use account invitations and appropriately limited access. Secrets belong in protected deployment configuration, not the website files.

8. How to organise the handover

1. **01_Brand:** logo masters, colours, fonts/licences and business details.
2. **02_Weddings:** one subfolder per project, each with Photos, Videos and project information.
3. **03_Corporate:** one subfolder per project, with matching Photos, Videos and project information.
4. **04_Showreels_Reels:** wedding/corporate showreels, two vertical reels and suggested hero timecodes.

5. **05_Team_Reviews:** portraits, biographies, genuine reviews and permitted client logos.
6. **06_Copy_Policies:** services, FAQs, process notes, request-form choices and approved policies.
7. **07_Approvals:** a simple asset list: filename, project, permission status, restrictions, preferred cover and final approver.

Use Drive, OneDrive, Dropbox or another mutually approved delivery method, with access granted to the developer. Name files clearly, for example `Wedding_Project01_Hero_Landscape_01.jpg` and `Brand_Project01_Film_Master.mp4`. Keep originals; website compression and responsive crops are handled separately. No private assets are uploaded automatically.

9. What can launch first?

Smaller first launch: 36 photographs (18 wedding, 12 corporate, 6 team/studio) and 6 videos (1 wedding showreel, 2 wedding-side films, 1 corporate showreel, 1 brand film and 1 vertical reel). This needs selective reuse and a smaller portfolio. Hide any unsupported work, team or testimonial placements rather than inventing content.

Recommended complete launch: the 60-photo / 12-video kit above, 6 project stories, 4-6 genuine reviews where available, approved business/copy/policy information and a tested live enquiry workflow. No need for a unique asset on every repeated page placement.

Suggested collection order: first logo/contact details and a short approved media shortlist; next the six project folders and copy; then permissions, policies and launch access. This allows the visual direction to be finalised while the remaining content is collected.

Prepared for the current EVR concept. Final content counts may change if pages, portfolio depth, services or integrations change. These are content recommendations, not production guarantees or commercial pricing.
